6.	Using the Vision AI Hub & Landmark Lens	8
7.	Managing Subscriptions, Aetheria+ & Travel Insurance	9
8.	Participating in Traveler's Guilds & The Bounty Board	10

1. Setting Up Your Explorer Profile

Every adventure begins with identity. Setting up your profile properly configures Aetheria's AI engine to format resources according to your account credentials and role levels.

■ Account Registration & Sign-In

Click the Auth Modal at the top right of the landing page. Sign in securely via Firebase credentials. This binds your generated itineraries to your personal account.

■ Selecting Your User Role

Aetheria supports three user levels: Explorer (default traveller view), Partner (vetted local merchants, hotels, and airlines), and Admin (system dashboard view). Ensure your role is set correctly to customize dashboard access.

■ Managing Travel Preferences

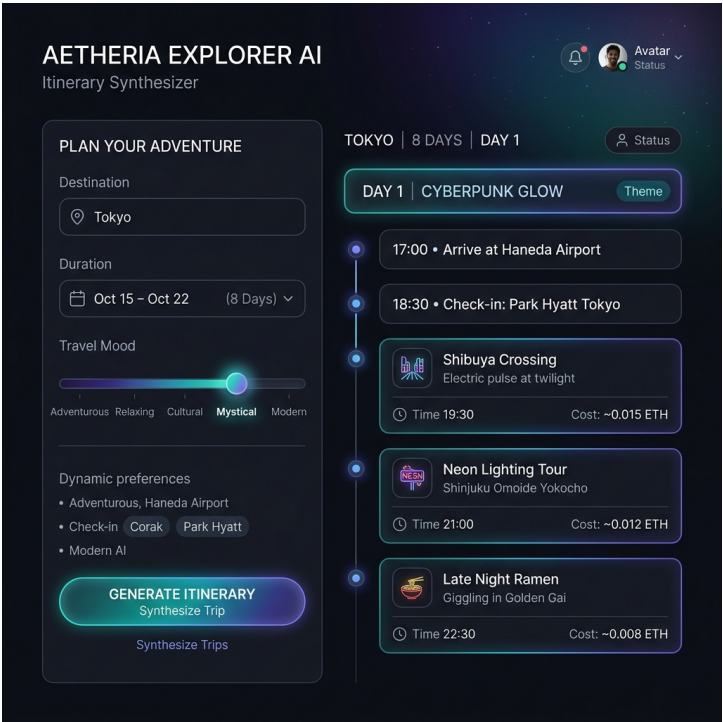

Visit the Profile Page. Here you can configure language properties (i18n locales), default currency representations (crypto or fiat), and links to external smartwatch sensors for biometric fatigue monitoring.

2. The Main Dashboard & 9 Travel Hubs

Aetheria Explorer collapses over 300 features into 9 main navigation hubs on the sidebar menu to reduce visual noise:

- **Core Hub:** Planner, Itinerary lists, and Aetheria+ active statuses.
- **AR & Immersive:** AR Wayfinding, historical lenses, and Art Galleries.
- **Gastronomy:** Allergen scanning, 3D menu previews, and local restaurant finder.
- **Transit & Finance:** E-Sim activation, global wallet, and insurance selection.

Interface Preview: AI Itinerary Synthesizer Panel

3. How to Synthesize Your AI Itinerary

Follow these steps to generate a multi-day itinerary that adapts dynamically to your cognitive fatigue thresholds and vibe preference:

■ Step 1: Define Destination & Duration

Input your target city (e.g. 'Tokyo') and pick travel dates. The scheduler automatically balances activity densities across these days.

■ Step 2: Calibrate Travel Vibe Sliders

Adjust the 'Travel Mood' slider. Options range from Adventurous and Relaxing to 'Mystical' and 'Modern'. A Mystical mood instructs the AI to select temple tours, tea ceremonies, and ancient ruins over standard sightseeing.

■ Step 3: Generate and Tweak Activities

Click 'Generate Itinerary'. Tweak individual daily cards to swap activities, adjust timeline times, or lock in specific restaurant recommendations.

■ Step 4: Execute Interactive Checklists

Your generated timeline is converted into a physical checklist. Tick off activities as you complete them to gain exploration XP points.

4. Navigating with AR Wayfinding & Time-Lapse

Augmented Reality overlays safe routes and historical eras directly onto physical streets:

- **AR Wayfinding:** Open the AR Hub on your mobile web app and grant camera permission. Neon-teal direction arrows will project on the street surface guiding you toward your destination.
- **AR Time-Lapse Mode:** Aim the lens at designated historic landmarks. Translucent, glowing purple holograms project the landmark as it appeared in historical eras (e.g. Edo Period).

Interface Preview: Live AR Wayfinding & Time-Lapse HUD

5. Vibe Market & Customizing Itineraries

The Vibe Market is Aetheria's decentralized aesthetic modifications store, allowing travellers to restyle travel logs and plans using Web3 transactions:

■ 1. Filter by Location

Search for vibes in specific cities. Tokyo features 'Cyberpunk Glow' and 'Neo-Shinjuku Nights' while Paris offers 'Bohemian Alleyways' and 'Gothic Echoes'.

■ 2. Evaluate Vibe Modifiers

Each vibe card details structural modifications: it lists 3-4 specific custom experiences, the mood parameters, and the price in ETH or local AETH tokens.

■ 3. Checkout & Apply Vibe Modifiers

Verify your wallet balance page and unlock the vibe. Once purchased, the vibe automatically acts as a template layer in your AI Itinerary Synthesizer, replacing standard activities with vibe-specialized options.

6. Using the Vision AI Hub & Quantum Souvenir

Vision AI Hub Scanner

Launch the camera from the Gastronomy or Local Culture hubs to scan physical objects in real-time:

- **Landmark Lens:** Aim at a historic site to fetch building year, original architect, and architectural notes.
- **Menu Explorer:** Aim at physical restaurant menus in foreign languages. Translates items, parses lists of ingredients, and checks allergens.
- **Street Art Decoder:** Identifies mural details, returning descriptions and artist biographies.

Managing Quantum Souvenirs

Quantum Souvenirs are digital tokens linked dynamically to physical travel locations. Unlike static tokens, they stay physically entangled with the site's environmental weather metrics. Open your digital souvenir box to inspect their states: as live rain or snow occurs in the original city, your souvenir card transforms its visual theme to match the current climate.

7. Managing Subscriptions & Travel Insurance

Unlocking Aetheria+ and Premium Passes

Advanced features (AR lenses, AI planners, and Landmark Lens translation databases) require premium access credentials. Aetheria features a hybrid authorization scheme:

- **Global Subscription:** Unlock all hubs globally via a recurring monthly plan managed on the Wallet Page.
- **Booking-linked Pass:** Purchase a temporary pass tied to a single itinerary booking. This pass grants premium access exclusively for the duration and path of that trip.

Synthesizing Integrated Travel Insurance

Navigate to the Transit & Finance hub, enter your booking numbers, and click 'Synthesize Policy'. Select your risk coverage (Basic, Premium, or Extreme Adventure) and checkout using the sandbox payment form. Verify your payment completes successfully to lock in your coverage confirmation code.

8. Joining Traveler's Guilds & The Bounty Board

Traveler's Guilds

Join group chat threads and share group itineraries based on special interests: Foodie Guilds, Art Explorer Guilds, or Extreme Adventure Guilds. Connect async and schedule joint group activities straight into your planner timeline.

The Bounty Board Challenges

Participate in physical scavenger hunts and challenges at your destination. Examples include visiting historic shrines or uploading snapshots of regional street food. Complete challenges to claim travel points and level up your traveler rank.
